

IT Asset & Patch Management Solution for Small & Medium Organisations

Comprehensive, simple to use, & yet very affordable

IT Asset & Patch Management Solution for Small & Medium Organisations

Comprehensive, simple to use, & yet very affordable

You are a small or medium-sized organisation struggling to cope with the ever-increasing requirements of IT as well as having to comply with new regulations every day.

You don't have much manpower, and in most cases, that manpower is not geared to handle all the demands made on the IT team.

One of your requirements is to know where your IT assets are and the detailed configuration of those assets along with what software has been installed.

Additionally, you have to ensure cybersecurity by having all your computer's operating system patches updated in time.

Benefits of IT Asset and Patch Management solution

IT Asset and Patch Management software solutions are essential for several reasons:

1. Security and Compliance
2. Risk Mitigation
3. Operational Efficiency
4. Regulatory Requirements
5. Asset Tracking and Inventory Management
6. Remote Management
7. Reduced Downtime
8. Cost Savings
9. Vendor Management
10. Audit and Reporting

A perfect tool for IT Asset & Patch Management

Asset Management

- ✓ Complete & detailed hardware information & configuration of all your computers, in whichever location they may be, is now available to you on a single console.
- ✓ Hardware information is automatically updated every day, so you always have the latest updated asset information.
- ✓ Network Adapter Information
- ✓ Hardware Change Logs Monitoring
- ✓ Log-On User Information
- ✓ Updated list of installed software on every computer is now available whenever you want.

Patch Management

- ✓ Install the Windows update anytime on a single or multiple devices.
- ✓ Covers patch management for MS Windows and MS Office.
- ✓ Know which updates are pending.
- ✓ Choose the updates you want to install.
- ✓ Click on a button, and the update will install, whatever the location of the computer.
- ✓ You can manually choose when the patch update should happen.
- ✓ You can also automate patch updates.

Reporting

- ✓ All Asset Inventory Reports
- ✓ Customisable Reports (Columns)
- ✓ Display Logs for Auditors

Additional Tools Provided Free of Cost

Along with EaseMyAMC Asset & Patch Management, you get powerful tools integrated into the same solution, which can help you:

1. Monitor your computers
2. Manage your computers
3. Troubleshoot your computers

in whichever location or branch it may be in, right from a single cloud console.

Besides the above, it will also allow you to:

- Install software on one computer or multiple computers, in whichever location or branch they may be at, all at the click of a button.
- Have a remote tool to remotely take access to a computer.
- Use scripts to remotely do tasks that otherwise would require someone to physically go and do them.
- Automate routine maintenance tasks so as to free your time and reduce service calls.
- Know which computers have had their hard disks or RAM changed.
- Do all the above from your cloud console or using our powerful Android App – which frees you and allows you to have full control and functionality wherever you may be, in the office or outside.
