

# Beachhead Solutions

---

Unified Device Security & Compliance Platform

Overview

## Introduction

Beachhead Solutions delivers a cloud-based platform—BeachheadSecure®—that empowers organizations and MSPs to protect critical data across PC, MAC, Mobile & USB devices, enforce encryption, and achieved compliance. With 24/7/365 managed security, BeachheadSecure provides intuitive, automated controls for encryption, remote data access, and risk response, supporting modern hybrid workforces and regulatory requirements.

## 1. The Problem

Organizations and MSPs face:

- Escalating cyber threats targeting endpoints, mobile devices, and removable storage
- The need for continuous, auditable encryption and data access control
- Complex compliance requirements (NIST, ISO 27001, CIS, PCI-DSS, HIPPA, DPDP, etc.)
- Managing security across diverse device types and distributed workforces
- The challenge of automating threat response and minimizing risk exposure

## 2. The Beachhead Solutions Platform

BeachheadSecure® delivers a unified, cloud-based solution that:

- Enforces device encryption and remote data access control across PCs, Macs, USBs, phones, tablets, and servers
- Automates threat response with RiskResponder™ to mitigate risks in real time
- Provides granular device and data reporting for compliance and auditability
- Supports regulatory frameworks with ComplianceEZ, mapping upto 68 controls to 800+ requirements
- Enables adjustable security clearance and Windows security management
- Offers easy deployment, centralized management, and scalable protection for organizations and MSPs

Key Outcome: Continuous, automated device security and compliance for endpoints, managed from a single intuitive console.

### 3. How It Works

BeachheadSecure® automates and streamlines:

- Device encryption and access control for all business devices
- Remote data access management, including lock, wipe, and revoke capabilities
- Endpoint risk detection and response, with automated alerts and mitigation
- Compliance management, mapping controls to major frameworks and certifications
- Granular reporting for devices, users, and data access events
- Adjustable security clearance for flexible, risk-based policy enforcement

Each feature is designed for:

- Cloud-based, multi-tenant management
- Seamless integration with MSP and enterprise workflows
- Scalable deployment across global device fleets

### 4. Technology Behind Beachhead Solutions

Device Encryption:

- Enforces encryption on PCs, Macs, USBs, phones, tablets, and servers. Continuous, auditable protection for data at rest.

Remote Data Access Control:

- Lock, wipe, or revoke access to data remotely. Enforce “Zero-Trust” principles across endpoints.

RiskResponder™:

- Automated threat response based on environmental or behavioral risk triggers.

ComplianceEZ:

- Upto 68 Mapped controls covering 800+ requirements for CMMC, HIPAA, NIST, FTC, ISO, CIS, and more.

Granular Reporting:

- Detailed device, user, and data access reporting for compliance and audits.

Windows Security Management:

- Account-wide PC encryption and data access control.

## 5. What Organizations Gain

- Unified, automated security for all devices and data
- Simplified compliance with major regulatory frameworks
- Real-time risk mitigation and threat response
- Centralized, cloud-based management and reporting
- Scalable, easy-to-deploy solution for MSPs and enterprises
- Enhanced client trust and competitive differentiation

## 6. Orchestration of Security, Compliance, and Operations

BeachheadSecure® intelligently connects:

- Device encryption and access control with compliance and audit requirements
- Automated threat response with endpoint detection and risk mitigation
- Multi-tenant dashboards with MSP and enterprise workflows
- Granular reporting with regulatory and customer assurance

Deliverables include:

- Continuous, auditable device encryption
- Automated risk response and remote data access control
- Compliance documentation and reporting
- Actionable insights for IT, compliance, and business teams

This orchestration ensures that device security, compliance, and operational goals are unified and aligned with business strategy.

## 7. Use Cases

MSP Security Services:

- Deliver managed device security, encryption, and compliance for clients

Regulatory Compliance:

- Meet and document requirements for CMMC, HIPAA, NIST, FTC, ISO, CIS, and more

Remote Workforce Security:

- Protect and control data security on distributed endpoints and mobile devices

Automated Threat Response:

- Instantly mitigate risks with automated, policy-driven actions

Each use case is supported by robust automation, compliance mapping, and reporting features.

## 8. Value

- Trusted by thousands of organizations in 30+ countries
- Recognized for ease of deployment, management, and compliance support
- All-in-one platform for device security, compliance, and risk response
- Supported by a global partner network and award-winning innovation

## Conclusion

Beachhead Solutions is more than just a device security tool—it is a strategic platform for unified, automated, and compliant endpoint protection. With BeachheadSecure®, organizations and MSPs can confidently secure all devices, meet regulatory demands, and respond to threats in real time—empowering business growth and resilience in a dynamic threat landscape.
